ABOUT MYSELF

I'm Mahmod, a dedicated Full Stack Software Engineer with over five years of experience, specializing in front-end development. My expertise spans across IoT, AI, and data analysis projects, where I've built scalable, high-impact platforms. With a strong focus on performance optimization and seamless user experiences, I thrive in dynamic team environments, consistently delivering innovative solutions. Passionate about continuous learning, I'm driven to take on new challenges and contribute to cutting-edge projects that push the boundaries of technology.

WORK EXPERIENCE

13 OCT 2024 – CURRENT Dubai, United Arab Emirates
Ntigra AI Applications and Services Senior Frontend Developer

- Development and optimization of 3+ AI-powered Chrome extensions, significantly improving performance and user experience.
- Contributed to architecting a new structure for Chrome extensions using React, Tailwind CSS, and TypeScript, enhancing maintainability and scalability.
- Worked on AI-driven applications, addressing challenges related to large-scale data processing and real-time data handling.
- Focused on improving UI/UX design, ensuring seamless user interaction and high-performance front-end solutions.
- Applied Domain-Driven Design (DDD) principles to create modular, scalable, and maintainable front-end architectures, improving code organization and business logic separation.
- Utilized Design Factory patterns to streamline component reuse and scalability, enabling efficient UI development and maintaining a consistent design system

5 JUL 2024 – 1 FEB 2025
Front End Lead Unifi Solutions

- Managed and led a team of four frontend developers , overseeing all phases of the application development lifecycle, including planning, requirements analysis, API and UI/UX design, development, testing, and post launch support.
- Increased team efficiency by 20% by assigning tasks based on team members' strengths, ensuring high-quality output on-time delivery.
- Enhanced application performance by 95%, reducing load times from 8 seconds to less than 1 second for data-intensive applications like tracking systems and map-based solutions, resulting in a 30% improvement in user retention. Developed a library of reusable frontend components that reduced development time by 40% across multiple projects, improving consistency and scalability.
- Designed and implemented dynamic data analysis pages using D3.js and Highcharts, offering real-time visual insights in complex datasets, greatly enhancing users' decision-making processes and operational efficiency
- Architected and optimized a high-performance tracking system managing over 5,000 vehicles with real-time monitoring and playback functionality. This system reduced operational costs by 15%, offering clients precise, reliable tracking and improved asset management.
- Led the translation of platforms into multiple languages, streamlining the translation process and significantly improving platform performance for global users, ensuring scalability for future growth.

6 APR 2023 – 3 JUN 2024
Senior Frontend Developer Unifi Solutions

- Built a flexible and scalable component library that streamlined development across multiple projects, ensuring a unified and efficient frontend architecture.
- Led performance optimizations that reduced page load times and improved responsiveness, enhancing user experience across web applications.
- Developed dynamic form builders and configurable UI elements, reducing redundant code and making applications more adaptable to business needs.
- Integrated real-time data streaming solutions using WebSockets and GraphQL subscriptions, enabling instant updates for live dashboards and monitoring systems.
- Worked closely with backend engineers to design efficient API contracts, optimizing data fetching and reducing network overhead.
- Refactored legacy codebases, applying modern best practices and improving maintainability, scalability, and readability.
- Implemented state management solutions with Redux and Zustand, ensuring predictable and scalable application state handling.
- Designed and built highly interactive dashboards, integrating third-party libraries like D3.js, Recharts, and Chart.js to visualize complex data intuitively.

- Contributed to the development of a large-scale IoT project, integrating various IoT solutions and helping select the appropriate frontend architecture to ensure smooth system orientation and scalability.
- Architected and optimized a high-performance tracking system managing over 5,000 vehicles with real-time monitoring and playback functionality. This system reduced operational costs by 15%, offering clients precise, reliable tracking and improved asset management.
- Led the translation of platforms into multiple languages, streamlining the translation process and significantly improving platform performance for global users, ensuring scalability for future growth.
- Developed reusable frontend components, created user experience graphics, and supported the organization of development resources for a modular approach to the project
- Led the implementation of Google Maps integration, handling all map-related functionalities such as tracking systems, geofencing, playback, clustering, and optimizing performance to manage large-scale map data seamlessly.
- Designed and implemented a dynamic reporting system using Vue.js that allowed users to create and schedule PDF reports. The reports were customizable and included various visualization tools such as charts and graphs to help users gain valuable insights.
- Developed powerful analysis pages featuring D3.js visualization tools, delivering critical insights to end-users.

17 JAN 2020 – 11 MAY 2021 Dubai, United Arab Emirates
FullStack Freelance

- Architected, designed, and led the development of two full-scale platforms for a car dealership and real estate management system, delivering dynamic property and vehicle listings with advanced features for both admins and end-users.
- Developed and maintained web applications using Laravel, Nuxt.js, and MySQL, implementing complex features such as custom fields, data validation, and advanced filtering to streamline processes and enhance user experience.
- Leveraged server-side rendering (SSR) with Nuxt.js to boost SEO, significantly improving the platforms' visibility in search engines and driving higher traffic.
- Integrated secure OAuth authentication (Facebook, Google, Apple), allowing users to sign in seamlessly while ensuring the highest standards of security and data protection.
- Optimized both performance and scalability, enabling the platforms to efficiently handle large volumes of property and vehicle listings while ensuring smooth performance under heavy loads.

● EDUCATION AND TRAINING

8 FEB 2016 – 21 SEP 2020
Computer Science Al-Baath University

Thesis Developing a secure electronic voting system using blockchain technology, Ethereum, smart contracts (Solidity), Truffle, Ganache, and implementing with Javascript and Web3.js.

● DIGITAL SKILLS

React (JS) | Next JS | Vue JS | tailwind css | MobX, Zustand | Vite | TypeScript | Node JS | NestJS | NoSQL | MongoDB | RESTful APIs | Blockchain | CI&CD | Git, Bitbucket, Gradle, CI, Jenkins, JIRA, Docker

● PROJECTS

Disrupt-x

Disrupt-X is a global IoT solutions platform headquartered in Dubai and Malaysia. The company is a leading provider of smart, AI-based technology solutions and digitalization. It serves over 25,000 customers. Some of the new IoT solutions I contributed to include:

Fleet Management - Metro Locks - Smart Parking - Facility Booking - Cloud Orbit - Cognitive Neurons

link: <https://disrupt-x.io/> - <https://cloud.disrupt-x.io/>

ALEF

The ALEF IoT Platform is a comprehensive, flexible IoT solution designed to automate operations and enhance efficiency. Key features include end-to-end IoT solutions, compatibility with various communication protocols and hardware, centralized device management, a customizable dashboard builder, white labeling support, and flexible deployment options (cloud, hybrid, or on-premises). It aims to simplify IoT implementation and management for diverse applications.

Link: <https://cloud.alefiot.io/>

Aligner-KDS

Aligner-KDS is an advanced kitchen display system designed to optimize restaurant operations. This state-of-the-art solution features an intuitive interface, real-time order management, and enhanced communication between kitchen and front-of-house staff. It includes an admin dashboard, a super admin dashboard, a kitchen screen for real-time order display, an order screen, and a customer display screen showing the current order number. The system also offers real-time inventory management, detailed order analytics.

MEDXSOL

The Integrated Medication and Blister Pack Management System represents a sophisticated solution designed to streamline medication management for healthcare facilities, pharmacies, and patients alike. This innovative system combines cutting-edge technology with user-friendly interfaces to ensure accurate medication

link:<https://medxsol.com/> - <https://check.medxsol.com/>

Facilitrol-X

Facilitrol-X is an all-in-one CMMS and CAFM solution designed to streamline your facility management by integrating with IoT data, BMS, and existing systems. Gain complete visibility of your assets, equipment, and maintenance operations, along with real-time IoT insights, all on a single cloud-based platform. Facilitrol-X simplifies the complex, making facility management more efficient, proactive, and data-driven.

link:<https://facilitrol-x.io/>

ABIOT

A leading Saudi IoT platform providing scalable and efficient IoT solutions for various industries, including Smart Next, Asset Watch, and Facility Booking.

link:<https://abiot.io/>

Cracking IoT Conference

The largest IoT event in MENA, held in the UAE in collaboration with Intel, bringing together 300 C-suite executives and 40 global IoT leaders for discussions and workshops.

Urban AI

Urban AI is a video analytics platform designed for managing urban spaces efficiently. It offers solutions such as Smart Parking, Smart Space Management, and real-time facility video analytics. These features help optimize city resources, improve traffic flow by reducing the time spent searching for parking, and enhance space utility. The platform's real-time insights empower decision-making, improve urban efficiency, and elevate security.

Defcon Patrols

Defcon Patrols centralizes incident and alarm management for IoT-integrated security and safety systems. It offers intrusion detection, video management, and real-time safety alerts, ensuring quick responses and comprehensive monitoring. The platform's advanced data visualization tools and tailored alerts empower businesses to make insightful decisions, enhancing operational efficiency while safeguarding assets and personnel.
